

Sliding  
glass panels

Permanent  
glazing

# Murano

Glissando  
+ Finestra

Just  
*enjoy* life!

**Lewens**  
MARKISEN

*All-round glazing*

*Murano Vetro glass roof with sliding glass panels:  
Side-opening type on the side walls, 4-track with 4 panels,  
Centre-opening type at the front, 2-track with 4 panels.  
Equipped with optional triangular infill  
with glass retaining strips (type A).*

## Murano Glissando – sliding glass panels

Flexible, customised weather protection

### Side-opening type

*All glass panels are slid to one side left or right for opening. Depending on the desired width and height, 2, 3, 4 or 5 sliding panels can be mounted on 2, 3, 4 or 5 tracks.*

## Tailor-made comfort

- For glass roofs and permanently modified wall niches
- For all types and styles of Murano glass roofs from Lewens
- Max. width:  
Centre-opening type 1150 cm,  
Side-opening type 580 cm
- Wall height max. 260 cm  
(with single-pane safety glass 10 mm)
- Options:  
Lock,  
deeper pull grip handle(s),  
wall connection profile,  
triangular infill

The sliding elements are fitted as standard with **handles in a purist, flat style**.

**Deeper pull grip handles** in a more elegant design are optionally available that make it even easier to open and close the panels.

A transparent **rubber trim** closes the gap on the centre-opening type.

### Good guidance:

A prerequisite for the installation of sliding elements on the side walls of the glass roof is a support profile (triangular infill/ Finestra inclined element).

Deeper pull grip handle option

### Triangular infill (option)

The triangular opening remaining can be glazed optionally to prevent the ingress of wind and weather above the side walls. (Here: type B with glass retainer clips)

Murano glass roofs can be fitted with sliding glass side walls offering protection from the wind and weather. The glass walls consist of 2 to 10 upright glass panels creating a transparent wall. Concealed ball-bearing rollers guarantee virtually silent running.

## Centre-opening type

The panels are slid apart to the left and right for opening. Depending on the desired dimensions, 4, 6, 8 or 10 sliding panels can be mounted on 2, 3, 4 or 5 rails.

## Glass retaining strips (Type A)

*The glass is attached flush with the surround and virtually invisibly using glass retaining strips at the top and bottom. An air gap remains underneath the box/cassette as well as a gap relative to the wall and eaves.*

## Glass retainer clips (Type B)

*A visually attractive, almost "floating" attachment that leaves a gap open around the glass.*

## Option Triangular infill

The support profile required for the installation of sliding glass elements is used to attach the top running rail. It leaves a triangular opening in the upper area below the glass roof, which can be glazed optionally to prevent the elements from encroaching above the side walls.

**Virtually invisible:**  
Triangular infill with  
glass retaining strips

**"Floating" attachment:**  
Triangular infill with  
glass retainer clips

## Inclined section type

### *for permanent glazing of side walls*

*Can be used to close the space between the roof and side glazing without any gap.*

*Below this, either rail systems for Glissando sliding glass panels or permanent rectangular glazing can be installed.*

## Rectangular type

### *for permanent glazing of rectangular spaces*

*The solution for glazing down to the ground at the front and back of the glass roof ...*

*... and as a complement to the inclined section on side walls for*

## complete glazing

*of entire glass roof sides.*

## Murano Finestra

### Permanent glazing

Permanent glazing is the best way to achieve maximum protection from wind, weather and draughts. This can be realised as partial glazing of individual wall sections or complete glazing of entire walls up to 500 cm wide.

### **Seamless connection**

*Glass frame profiles border the glass panels all round and perfectly enclose the space between the glass roof and vertical glazed panels.*
